

PLASMA LIFT THERAPY

Non Surgical Eye Lid Lift, Smokers' lines, Frown lines and more

Your New Secret Weapon. Beauty without Surgery

The new and revolutionary method of eyelid surgery without surgery.

Non Surgical Eye Lift Do you look tired all the time? The eyes are the windows to the soul and if you can't see them because of your hooded lids, you can now do something about it, without surgery. This is a fantastic anti-ageing solution for those who do not want to go under the knife and are looking for a different solution that is also more affordable.

Smokers Lines - Are you sick and tired of looking at the ugly lines above your lips? Now you can do something about it without fillers and surgery. The Plasma Cosmetic treatment is a non-invasive treatment that shrinks excess skin, bags and lines and wrinkles!

Frown Lines - Reduce brow lines and frown lines that make you look cranky all the time. There is no damage to the skin, no open wounds and the healing time is low.

There is no general anaesthetic, no cutting or stitching and very little down time.

It works by using your own plasma to stimulate an instant contraction and tightening of the skin fibres.

There is no general anaesthetic, no cutting or stitching and very little down time, if any.

How long does the treatment take? We allow 90 minutes including time for the anaesthetic to work and consent forms to be completed. You will be informed of where to purchase anaesthetic cream that can be administered during your treatment.

How many treatments will I need? One treatment is often enough depending on skin type, severity of wrinkles and client's expectation. For some a 2nd or even 3rd treatment may be required to achieve the desired outcome, follow up treatments can be carried after 8-12 weeks. Is this **procedure safe?** Yes most definitely.

How long will results last? Typically around 2-5 years, but is subject to the number of treatments you may require, your lifestyle and how you personally age. You will continue to age and your skin will continue to relax as part of the normal ageing process, and eventually you may see problems such as wrinkles and saggy skin re-appear. However it can simply be repeated again.

When will I see the results? - Results can usually be seen immediately, full result should be visible after 2-4 weeks however the treated area will continue to improve for 2-3 months. Results are expected to last 2-3 years, the treatment can be repeated.

What after effects can I expect? Plasma Cosmetic treatments are very safe, on rare occasions, there have been reports of hypersensitivity or allergic reactions to the local anaesthetic, wound healing problems, skin infections, scarring, slight swelling, redness, tingling, the occurrence of herpes simplex (cold sore) and skin depigmentation (whitening).

How does it work? The machine conductor tip creates a tiny plasma flash from the tip (similar to a tiny lightning bolt). The tip does not touch the skin. The plasma lightning jumps from the tip to the skin and evaporates, leaving a very small superficial brown carbon spots that look like freckles.

There is no heat to the surrounding skin. These small spots draw the skin together in their direct environment and shrink the excess skin. We follow a specific pattern to set the points to look like a grid (a reduction grid).

This is a non-surgical, non-invasive treatment that shrinks excess skin, bags and wrinkles!

This treatment protocol is also used for other areas of the face/body.

AFTERCARE: Immediately after the procedure, the treated area will be quite red and mildly swollen. This can last from 1-3 days. The small carbon dots will dry to become small crusts. These crusts must not under any circumstances be picked or scratched off, they must be left to fall off on their own which can take anything from 5-14 days. These dots can be covered with a mineral foundation or mineral concealer.

Once the crusts have fallen off it is imperative that you use the Healing Serum and use an SPF 50 sunscreen.

Absolutely no sun on the area without protection for 3 months.
